THE URKUND ANALYSIS

Quick Start Guide

Learn the basics of our redesigned analysis report.

To provide the best possible experience for our users, we have redesigned our system so it's more supportive of your needs. This guide takes you through the new interface, step by step.
Step-by-step:
**ANALYSIS OVERVIEW**

This is where you start to assess the analysis. A summary of the results is presented. Here you will find the number of text matches and warnings, where these were found in the document and the overall similarity percentage.

Seeing a score of 66% is not a proof of plagiarism; there could be several reasons why a score is high.

Dear Professor,

Here is my paper.

Best regards, Marie
**Analysis Overview**

6 pages out of total 7 pages contain findings.

**Findings**

- **14 Matching Text**: High similarity of content
- **3 Warnings**: Suspicious attempts to cheat

**Similarity Bars**

We display two similarities: this assignment’s aggregated similarity percentage and the receiver’s average similarity, i.e. the average similarity of all submitted documents to this receiver.

- **50%**: This assignment
- **20%**: Receiver’s average

**Message**

Dear Prof. Here is my paper.

With best regards, Marie
PRO TIPS

Help to interpret the analysis

Urkbot is here to help you out. It will provide you with document specific tips that can help you interpret the analysis result. This feature is still under development and will be improved further on.

Seeing a score of 66% is not a proof of plagiarism; there could be several reasons why a score is high.

EXPORT AND HELP

Download analysis as pdf or this guide
If you want to export the analysis as a pdf and download it to your computer, click on the arrow-button. The question mark will open this Quick Start Guide in a new tab.
Step-by-step:

**FINDINGS TAB**

The Findings tab is a new way of assessing the Urund analysis. Here you’ll see the student’s text side-by-side with the matched source text. This way you can focus on going through the matches without having to scroll through the whole document (which you can do through the Entire Document tab).
What happens if you don’t seek treatment? Dive Master and Ph.Md John Doe were DCS, a permanent residual handicap may be the result: this can be dysfunction - usually very embarrassing, sexual dysfunction or weakness, to name a but few. In some instances of neurological DCS, there may be permanent damage to the spinal cord, which may or may not improve. However, this type of damage may decrease the likelihood of recovery from a subsequent bout of DCS. Untreated joint pains that subside are sometimes a sign of bone damage called osteonecrosis. Usually this will not cause symptoms unless there are many bouts of untreated DCS. If this happens, however, there may be enough damage to cause the bone to become brittle or for joints to collapse or become arthritic.¹ (Doe, 2011).

In severe DCS, a permanent residual handicap may be the result: this can be bladder dysfunction (very embarrassing), sexual dysfunction or muscular weakness, to name a but few. In some instances of neurological DCS, there may be permanent damage to the spinal cord, which may or may not improve. However, this type of damage may decrease the likelihood of recovery from a subsequent bout of DCS. Untreated joint pains that subside are sometimes a sign of bone damage called osteonecrosis. In severe DCS, a permanent residual handicap may be the result: this can be a bladder dysfunction (very embarrassing), sexual dysfunction or muscular weakness, to name a but few. In some instances of neurological DCS, there may be permanent damage to the spinal cord, which may or may not cause symptoms. However, this type of damage may decrease the likelihood of recovery from a subsequent bout of DCS. Untreated joint pains that subside are thought to cause small areas of bone damage called osteonecrosis. Usually this will not cause symptoms unless there are many bouts of untreated DCS. If this happens, however, there may be enough damage to cause the bone to become brittle or for joints to collapse or become arthritic.

What happens if you don’t seek treatment? Dive Master and Ph.Md John Doe states: “In severe DCS, a permanent residual handicap may be the result: this can be a bladder dysfunction - usually very embarrassing, sexual dysfunction or muscular weakness, to name a but few. In some instances of neurological DCS, there may be permanent damage to the spinal cord, which may or may not cause symptoms. However, this type of damage may decrease the likelihood of recovery from a subsequent bout of DCS. Untreated joint pains that subside are thought to cause small areas of bone damage called osteonecrosis. Usually this will not cause symptoms unless there are many bouts of untreated DCS. If this happens, however, there may be enough damage to cause the bone to become brittle or for joints to collapse or become arthritic.” (Doe, 2011).
The diver may complain of headache or vertigo, unusual fatigue or tiredness. He or she may have a rash, pain in one or more joints, muscular weakness or tingling in the arms or legs or paralysis. Less often, shock, difficulties with breathing, unconsciousness or death may be seen. The symptoms generally appear in a relatively short period after completing the dive. Almost 50 per cent of divers develop symptoms within the first hour after the dive, 90 per cent within six hours and 98 per cent within the first 24 hours. In practice this means symptoms that appear more than 24 hours after the dive are probably not decompression sickness. An exception is if the diver has travelled in an aircraft or has been travelling in the mountains. Under these circumstances, low pressure can still trigger decompression sickness more than 24 hours after the last dive. As a result, it is wise not to fly within 24 hours of a deep dive. Here a German Messerschmitt plane crashed during the Battle of Crete during World War II in 1941(3) has been recently granted.

Link to source document or website
This is a link to the original source. The symbol tells you which type of source it is; W meaning website, SA student assignment and J content from a journal.

EXEMPTED SOURCE

When the source text cannot be shown

It may occur that we can't display the text from the original source. This can be due to an agreement with our partners, or if the author has chosen to exempt the content.

1941(3) has been recently granted.

The contents of the source document cannot be displayed!

Possible reasons:

1. The document is stored in the URKUND Partner section and is listed as inaccessible. If you do not own this book already, you need to purchase it from the vendor.

2. The document has been exempted as a viewable source in the URKUND Archive by the author

Submitter and Receiver information is available by hovering the mouse pointer on the source name above.
Navigation and document information

You navigate between findings, sources and entire document via the tabs in the header. Here you'll also find some quick info about the document, export pdf and help.

**The dangers of Diving**

The Greek archipelago, this nautical Eden, offers unobstructed visibility. In principle shark feeding frenzies from the Phoenician, Egyptian, Greek and Roman empires have been observed. The renowned free diver and poet Geoffrey van der Hoeven claimed, Diving is like entering the kingdom of heaven, but it is one that is constantly changing. Although the situation is beginning to improve,

John D. Ive, PhD Hist. at Cornell summarizes in Modern Aquatic Archeology And Other Naval Gazing 2012 (2) (trans.) The reduced protectionism around the Mediterranean. (Just over seven years ago, the Greek authorities finally eased up on their firm ban of SCUBA diving. Their strict approach was based, wisely so, on the fact that there are archaeological treasures basically everywhere in the Aegean seas. Now they have given some authorized diving centers permission to dive on a few selected sites. Diving Center Crete and Adventure Blue are the two most famous dive centers in the area.

One of the dive sites is located off the island of Thodorou where permission to dive in an area where a German Messerschmitt plane crashed during the Battle of Crete during World War II in 1941(3) has been recently granted.

Although planes from WWII could be considered ancient by some so do not feel the Greek authorities that there is any immediate danger to the Greek cultural treasures for scuba divers visiting that particular site. It has namely made sure to clear the area of every single gadget of archaeological value before being released until the grasshoppers. It is unfortunately the case that too often, if not almost always, or perhaps even always, picked souvenirs from the seabed, be it from wrecks or sunken columns and dropped fishing lines. It is also why this ban on scuba diving has been in place for so long. It is said that Jacques Yves Cousteau was immediately ported from Athens Underwater Archaeology Museum after they realized the consequences of his and Gagnon’s invention of the “aqua lung” would it become adopted by a the general populace. (4)
The Greek archipelago, this nautical Eden for the world divers. Clear water with meters and meters of the free and unobstructed visibility. In principle shark free and a Lego box of undiscovered treasures and sunken cities and lower ships from the Phoenician, Egyptian, Greek and Roman times. A "paradise that was lost but now at last recovered" by the renowned free diver and poet Geoffrey van Spladoosh once put it. (1) Now, however, it is not really free access to the kingdom of heaven, but it is one that is controlled and checked very hard by the Greek authorities and its naval forces, although the situation is beginning to improve.
